Snowflake's Cross-Cloud Snowgrid

Starts 2 min before the session time

Snowgrid is a cross-cloud technology layer that interconnects your business’ ecosystems across regions and clouds so you can operate at global scale. With Snowgrid, organizations can work more efficiently across globally distributed teams and businesses to deliver faster results; gain visibility and control over their global data estate to comply with regulations; and easily replicate data and policies to maintain uptime. Come learn what’s new in cross-cloud Snowgrid across collaboration, data governance, and business continuity in this session.

What's New for Data Engineering

Starts 2 min before the session time

This session dives into why Snowflake is the cornerstone of modern data engineering workloads. Learn how you can build faster, more powerful, and simple data pipelines, with the language of your choice with Snowpark, all in a single platform with near-zero maintenance. The presentation includes a demo of our latest capabilities in action.
